

ENTERGY NEW ORLEANS, INC.
CITY OF NEW ORLEANS
Docket No. UD-16-02

Response of: Entergy New Orleans, Inc.
to the Fifth Set of Data Requests
of Requesting Party: Alliance for Affordable
Energy

Question No.: AAE 5-8

Part No.:

Addendum:

Question:

Did the above mentioned Navigant study consider the 2013 American Council for an Energy Efficient Economy (ACEEE) study of Energy Efficiency Potential in New Orleans? If no, why not?

Response:

As indicated in Table 11 at p. 30 of Exhibit SEC-14, Navigant benchmarked its evaluation relative to a range of other sources, including the 2013 ACEEE report (Report Number E138) for the statewide roadmap, but not the New Orleans-specific report (Report Number E13A), as well as more current sources of information.

Navigant used the statewide study (not the New Orleans-specific report) for benchmarking achievable potential for two reasons:

1. Navigant's benchmarking pool for achievable potential measured potential at the state level and included the ENO 2015 ICF study results. Navigant compared the achievable potential to actual savings at the state level. At the utility level, Navigant only compared actual spending and savings.
2. The ICF 2015 study was assumed by Navigant to be the most up-to-date study for potential savings for ENO and therefore was used as the basis of comparison.
