**Re: In Re: 2018 Triennial Integrated Resource Plan of Entergy New Orleans, Inc.
Docket No. UD-17-03**

Dear Ms. Johnson:

Entergy New Orleans, LLC (“ENO”) respectfully submits its Reply Comments Concerning the 2018 Integrated Resource Plan Report and Exhibits attached thereto in connection with the above referenced Docket. Please file an original and two copies into the record in the above referenced matter, and return a date-stamped copy to our courier.

The confidential information and documents included with the Reply Comments may be reviewed by appropriate representatives pursuant to the provisions of the Official Protective Order adopted in Council Resolution R-07-432 relative to the disclosure of Highly Sensitive Protected Materials (“HSPM”). As such, these confidential materials are being sent to the appropriate parties via UPS overnight delivery.

Should you have any questions regarding the above, I may be reached at (504) 576-2984. Thank you for your assistance with this matter.

Sincerely,

Harry M. Barton

BEFORE THE
COUNCIL OF THE CITY OF NEW ORLEANS

***EX PARTE: IN RE: 2018 TRIENNIAL)
INTEGRATED RESOURCE PLAN OF)
ENTERGY NEW ORLEANS, INC.)*** **DOCKET NO. UD-17-03**

**ENTERGY NEW ORLEANS, LLC'S REPLY COMMENTS
CONCERNING THE 2018 INTEGRATED RESOURCE PLAN REPORT**

Entergy New Orleans, LLC (“ENO”) respectfully submits its Reply to Comments Concerning the 2018 Integrated Resource Plan (“IRP”) Final Report. Despite robust participation from many parties throughout the 2018 IRP process, only the Alliance for Affordable Energy (“AAE”) submitted comments concerning ENO’s Final IRP Report. Part of the AAE’s comments focus on issues related to the Implementation Plan for Program Years 10-12 of Energy Smart, rather than ENO’s 2018 IRP Report. The procedural schedule in Council Resolution No. R-17-430, as modified by the Order of March 26, 2019, contemplates that ENO will file the Energy Smart Implementation Plan later this year. As such, ENO’s Reply Comments are confined to the limited set of issues raised by the AAE that do not relate to the Energy Smart Implementation Plan.

I. Limited Procedural Background and Related Issues.

The 2018 IRP cycle was conducted under the Council’s newly-revised IRP Rules, which were adopted in Council Resolution Nos. R-17-332 and R-17-429 and resulted from a year-long rulemaking initiated at the request of several parties to the 2015 IRP proceeding. The rulemaking considered many suggestions from several parties as to how the process and scope of the IRP should change in order to provide an optimal resource planning exercise for ENO, New Orleans, and ENO’s electric service customers. Based on the evidentiary record in that proceeding, the Council found that many of the suggested modifications had merit and should be adopted, while also finding that others were beyond the scope of, or would not be beneficial to, the IRP process.

As a result of the modifications and new procedural requirements adopted in that rulemaking, the 2018 IRP cycle has been the most collaboratively conducted IRP to date. This outcome is due, in large part, to the Rules requiring that the parties work to achieve consensus on, and “lock down,” certain inputs and assumptions by specific dates in the process. Indeed, the March 26, 2019 Order required that by December 7, 2018, following Technical Meeting 3, all inputs and assumptions were to be finalized. On December 4, 2018, the Council’s Advisors circulated a summary¹ of the consensus reached as to the Planning Scenarios and Strategies to be modeled for the 2018 IRP. This communication also memorialized the conditions upon which such consensus was reached and solicited any objection from any party to those agreed upon conditions.² No objections were lodged.

Attaining such consensus prior to conducting the modeling for the 2018 IRP greatly improved the efficiency of the Council’s process and has, evidently, significantly narrowed the number of issues about which parties have outstanding concerns as related to the 2018 IRP Report. Indeed, no intervenors or members of the public attended the Third Public Meeting to provide comments on the IRP to the Council and only the AAE filed written comments.

The AAE’s comments do raise one issue that was previously addressed in the rulemaking and in the Technical Meeting process adopted in Resolution No. R-17-430. The AAE complains that the IRP does not consider accelerated resource deactivations of existing units by “allowing

¹ See, Email and attachment from Jay Beatmann, dated December 4, 2018, attached hereto as Exhibit 1.

² These conditions included an agreement that “to the extent that the proposal varies from the Council’s IRP Rules, the Parties to the Docket agreed that any such variance shall not be precedential in any way for future IRP cycles, nor shall such variance serve as the basis for any finding that ENO has failed to comply with the Council’s IRP Rules for the 2018 IRP.” See, Exhibit 1. These conditions were essential to the consensus reached because, as discussed in the IRP Report, the use of two different sets of assumptions related to demand-side management made some of the side-by-side comparisons among portfolios contemplated by the IRP Rules impossible. As such, the parties’ agreement that ENO would not be found in violation of the Rules due to the inability to make such comparisons was key to ENO’s ability to conduct the IRP modeling in the manner memorialized in Exhibit 1.

potentially lower-cost resources to compete and replace inefficient and uneconomic power.”³

First, it should be noted that the AAE provided no evidence to substantiate the assertions that the Grand Gulf Nuclear Station (“GGNS”) or any other resources referenced in their comments are “uneconomic;” but making such assertions without evidentiary support is not unusual for the AAE. The more relevant consideration is that, in the rulemaking, the Council considered and rejected the idea that the deactivation analyses described by the AAE could or should be conducted in the IRP.⁴ Additionally, the AAE and other parties raised this same issue at Technical Meeting 2, wherein several hours of discussion were devoted to explaining why such analyses (i) were purposefully and intentionally rejected from inclusion in the Council’s IRP Rules, (ii) would be beyond the scope of, and increase the cost and time associated with, the IRP, (iii) could not be accommodated by modeling constraints and timelines, and (iv) would ultimately not provide relevant information to the Council to inform its decision making process.

On the last point, various legal issues were discussed, including that Power Purchase Agreements (“PPAs”), tariffs, and rates associated with GGNS and other resources are within the exclusive jurisdiction of the Federal Energy Regulatory Commission (“FERC”).⁵ As such, the requested analyses would not inform and empower effective Council decision-making since the Council cannot order the termination of agreements and rates approved by the FERC.

³ See, AAE Comments at pg. 7. The AAE raises this argument in furtherance of a position being advanced by the AAE and other parties in Council Docket UD-19-01. The AAE’s comments also state that this IRP proceeding can inform “a clear path forward” in Docket UD-19-01. However, comments from the AAE filed in UD-19-01 “disagree that ENO’s 2018 IRP should be used as a baseline for the Council’s RPS.” See, Energy Future New Orleans Coalition’s October 15, 2019 filing in Council Docket UD-19-01, at pg. 11. The AAE offers no explanation for these conflicting statements.

⁴ See, Council Resolution No. R-17-429, at pg. 26 (“[T]he Council agrees that requiring the type of analysis performed for resource retirement proceedings to be performed for every portfolio considered in an IRP process would be unduly burdensome and create a proceeding that would consume an unreasonable amount of resources.”).

⁵ The specific legal underpinnings of FERC’s exclusive jurisdiction over such matters, as determined by the United States Supreme Court in a case involving GGNS (*Mississippi Power & Light Co. v. Mississippi ex rel. Moore*, 487 U.S. 354, 375; 108 S.Ct. 2428, 2441; 101 L.Ed.2d 322 (1988)) was also explained in greater detail in a filing made by ENO in Council Docket No. UD-19-01 on July 15, 2019, at pgs. 17-19.

II. Demand-Side Management (“DSM”) Issues.

The remainder of the AAE’s substantive comments relate to issues involving the DSM potential studies and the Energy Smart Implementation Plan that ENO is required to file on or before December 7, 2019 (but which ENO has committed to file by November 22, 2019).

The AAE suggests that Navigant’s methodology for calibrating its model to Energy Smart Program Year 8 projected savings was unreasonably conservative.⁶ The AAE appears to have misunderstood Navigant’s approach on this point; Navigant did not “assess the accuracy of its estimate based on the amount of savings that has been historically achieved,” but rather considered actual historical results as well as the PY8 target in evaluating achievable potential. A detailed discussion of the methodology is included on pages 57-58 of the Navigant Potential Study (attached as Exhibit D of the IRP Report).

The AAE questions why the Navigant study did not include Conservation Voltage Reduction (“CVR”) as an energy efficiency measure while the Optimal study did. Navigant did not include CVR in its study because CVR is a grid-level measure that attempts to address voltage issues on the distribution grid, not a program that incents participating customers to increase energy efficiency at a particular service location. The Council’s Energy Smart program provides incentives to individual customers for installing measures in their home or business (such as insulation or A/C tune ups). It is worth noting that CVR is not included in the New Orleans Technical Resource Manual (“NOTRM”), which served as the main source of energy efficiency measures for the DSM potential studies, likely because it is not a customer-directed measure.

The AAE raises other questions concerning how the results of the potential studies were incorporated into the optimized portfolios. On the topic of ramp-up periods and rates for the programs a table of the annual MW reductions to peak and annual program cost associated with

⁶ AAE Comments, at p. 3-4.

all DSM programs selected in the five optimized portfolios is attached hereto as Exhibit 2. The annual MWh reduction attributed to the energy efficiency programs included in the optimized portfolios is detailed in the attached Exhibit 3. Finally, the overall peak reductions in the portfolios are lower than the total potential identified in the cases in the two studies because the Aurora model selects the DSM programs at the ENO peak hour which in some cases reflect less savings than the total potential identified generally in the studies.

The AAE notes that ENO included a Load and Capability table in the 2015 Final IRP. A similar table representing Load and Capability assumed in ENO's Business Plan 2019, which served as the basis for the assumptions and inputs used in modeling for the 2018 IRP, is attached hereto as Exhibit 4.

III. Conclusion.

ENO hopes that the above responses and attached Exhibits adequately address the AAE's concerns and looks forward to working with the Advisors, the AAE, and other stakeholders on the implementation of Program Years 10-12 of the Energy Smart program.

Respectfully submitted:

Parties to the 2018 IRP Docket (UD-17-03),

On November 28, 2018, the Third Technical Meeting of the Parties was held. The Meeting's purpose was, in part, to finalize the inputs, assumptions, Planning Scenarios and Planning Strategies that will be used for modeling in the 2018 IRP. The Council's procedural schedule requires that these items be finalized on or before December 7, 2018.

At the Technical Meeting the Parties in attendance, or represented by proxy, agreed to a proposal that ENO would model 3 Scenarios and 5 Strategies for the 2018 IRP. The attached slides summarize the Scenarios and Strategies agreed to by the Parties. This proposal is considered to be consistent with the minimum requirements set forth in the existing IRP rules by all of the Parties that participated in technical conference Number 3. The various aspects of the proposal are as follows:

1. IRP Rule 7(C) requires that "the Utility shall develop three to four Planning Scenarios." As the attached slides indicate, the Parties agreed to two Scenarios developed by the Utility (ENO) and one Scenario developed by Stakeholders.

2. IRP Rule 7(D) states that "the Utility shall identify two to four Planning Strategies." As the attached slides reflect, the Parties agreed that ENO shall model five Strategies.

3. IRP Rule 7(D)(2) requires that the Utility develop a Stakeholder Strategy and a Utility Reference Planning Strategy. As the attached slides indicate, ENO has agreed to forego development of a separate Utility Reference Planning Strategy and, instead treat the Least Cost Planning Strategy as the Utility Reference Planning Strategy. In part, this is the case due to the Advisors' request, which was agreed to by all parties participating in Technical Meeting Number 3, that several Strategies be devoted to modeling different sets of DSM inputs.

The Parties' agreement to the proposal of using Scenarios and Strategies in the attached slides is conditioned upon an agreement that, to the extent that the proposal varies from the Council's IRP Rules, the Parties to the Docket agreed that any such variance shall not be precedential in any way for future IRP cycles, nor shall such variance serve as the basis for any finding that ENO has failed to comply with the Council's IRP Rules for the 2018 IRP.

To the extent that any Party has an objection to the agreement reached at Technical Meeting 3, or believes that some aspect of that agreement differs from what is summarized above summary, or the attachment, the Advisors request that such objection or clarification be made via a reply to this message on or before December 6, 2018.

Thank you.

Jay Beatmann
